

ICS-Greenspeed Microfiber

Microfiber consists of very fine threads of polyester and polyamide (nylon) that combine to form a single thread. Microfibers are so thin (100 times thinner than a single strand of human hair) that when they are woven together they create a surface area 40 times greater than a regular fiber.

The ICS Greenspeed[®] microfiber is split so that an elaborate system of hollow tubes is created. These hollow tubes have two major advantages:

- When the product is wet, the water attracts dust and dirt into the hollow tubes.
- High absorbency capacity.

A damp Greenspeed[®] product removes attached dirt quickly and effectively, leaving no soap residue. Dry, the Greenspeed[®] products are ideal for use as a dust remover. The microfiber is naturally, positive-static charged, and thus able to remove and hold dust and light contamination.

- Can be laundered a minimal 500 times
- Thicker material while light in weight
- Unique pattern enables effective removal of dirt

May, 2012 Greenspeed was awarded a Nordic Ecolabel license. The Nordic Ecolabel means that the products meet the stringent environmental, quality and health requirements of the Nordic Ecolabelling Programme enables.

This guarantees an ecologically responsible production of cradle-to-grave, the highest product quality and functionality guaranteed in practice. Even the packaging is taken into account, with a low burden on the environment. In short, a clean environment, a perfect cleaning result and a proven longevity.
